# Transfer Programs To New Computer

It is rather easy and not difficult to buy a new PC. But what about the files part of your old computer? There are tons of ways you can use the moment you want to quickly transfer programs to a new computer. Many operating systems have a built in way to transfer files. To do such process for you: you can always buy a program. Or to move those files you can use an external hard drive. In any case, depending on how many files you have saved on your computer, this could be quite a time consuming task. On this page [Transfer Programs To New Computer](#) you will understand how to transfer programs to new computer.

With the operating system's ability, both computers would have to be turned on and connected to your network to transfer programs to new computer. You would then start the process on one machine, then have to set up the second to accept the files. The whole thing can be very impractical if your home has limited space to set up two PC systems. Or if you are unable to setup a network connection on the second computer system. On this site [Transfer Programs On XP To Windows 7](#) you will know how to transfer programs and data from XP to Windows 7.

There are programs that can transfer files for you. Some of those software can cost a bit. Even more if you are going to use the program only once, or twice, during the whole lifetime of your PC. Such method is not very cost effective unless you do plan to transfer files on a regular basis. Many people enjoy the use of an external hard drive. Those days, USB drives can hold quite a bit of data.

It is possible to use any drive on the market with external hard drives. To those some of those hard drives, you can transfer up to two terabytes of data. The best part about it is that once transferred, the files are still safely saved on the external hard drive. This is a good way to backup files and folders. Or when you transfer programs to new computer, you will then be able to save those important files you simply don't want to lose. Regardless of what method you wish to use, the actual transfer process itself is fairly easy to accomplish. It can be as easy as telling to your OS where to transfer your files, dragging the contents of your computer's hard drive to the external hard drive, or to click your mouse button on some purchased tool.
